COVID – 19 Tracker by Country – I have made a static dashboard tracking COVID – 19 Cases. Since it is a static dashboard so this data is not going to update if further new data is added but this dashboard is fully interactive. I have used a dual axis graph, applied advanced Conditional formatting and created different calculated fields so as to create new data which is useful for my dashboard.

Source- I extracted the dataset from
https://datahub.io/core/covid-19
(File Used – countries - aggregated)

Dashboard Link – Covid - 19 Tracker By Country
